

Connecting National EE Standards to Common Core Standards

The terms “environmental education” and “environmental literacy” can mean different things to different people, depending on their experience base, their focus, and their educational perspective. Regardless of a person’s definitions, it can’t be emphasized enough that we live in a society and a world that expects that our future generations to be more capable of making sound environmental decisions than in the past. Students and employers are demanding that the education sector take action to build a vision, tools, and capabilities for a sustainable future. This challenge brings new opportunities for educators to contribute to teaching and learning that shapes an environmentally literate citizenry.

Education must equip students with knowledge, skills, understanding, attitudes, and values compatible with a sustainable society. It goes beyond the “green” agenda to raise awareness of the complexity and dynamism of issues. It builds capacity for collaboration and creativity in problem-solving, critical reflection and systemic and futures thinking, a trans-disciplinary orientation, and motivates action for environmental sustainability.

Therefore, with the United States moving to develop a set of common core standards for teaching and learning in the K-12 settings, it is imperative that we in Kentucky make sure that those new standards correlate strongly with the learner standards already developed by the North American Association for Environmental Education (NAAEE). (The NAAEE K-12 standards for learning can be found in their entirety at <http://resources.spaces3.com/47edc444-7bd4-4093-918b-7964644cce75.pdf>.)

What follows in this document are “crosswalks” (or cross references) to both the new common core standards for English – Language Arts and for Mathematics. By doing this analysis of the standards one can see that instruction through environmental education can provide a myriad of ways to address the common core standards, while providing the basis for an environmentally literate Commonwealth.

Introduction to the Mathematics Cross Walk

Mathematics is a critical subject in problem solving. It is one of the major tools in the identification and assessing of our environment. It empowers a person to use a means of studying and recording all aspects of our ecosystem using quantitative and qualitative methods.

It is essential to the process of learning about our environment that “each person” has garnered a complete package of skills and concepts to make informed decisions. Hungerford and Volk (1990) recommend that skills for problem solving are essential for identifying and solving environmental problems.ⁱ In *A Problem Solving Approach to Environmental Problem Solving*, Quetel (1985) states it is crucial to have appropriate skills for problem solving to permit investigations that have merit and value.ⁱⁱ Good problem solving requires substantive mathematical skills. These must be in the repertoire of any person who is seeking to make an informed decision about our earth and our environment.

The National Council of Teachers of Mathematics and the National Research Council are unequivocal in their standards and principles that mathematics must be used in the context of problem solving. Connections to in-field study are critical to understanding relationships between mathematics and problem solving. It is especially poignant that mathematics connections and problem solving be used to make sense of phenomena such as the interactive systems of our earth and environment.

The Common Core State Standards for Mathematics are connected to National Council for Teachers of Mathematics Standardsⁱⁱⁱ and the National Research Council’s document, *Adding Up*.^{iv} Kentucky’s Common Core aligns with all of these organizations and their standards. It is necessary for the Kentucky Environmental Education Council, its Environmental Literacy Standards, and those of the North American Association for Environmental Education be aligned because mathematics and studying the environment are co-dependent in the process of making informed decisions.

Additionally the Standards of Mathematical Practice articulated in the Common Core Standards that include eight points, such as “making sense of problems, reasoning quantitatively, modeling, using appropriate tools,” are indeed the essentials for studying mathematics and for studying our environment. _____

Common Core Standards for Mathematics

4th Grade

<i>Common Core Standards for Mathematics</i>	<i>NAAEE: Guidelines for Learning (4th Grade)</i>
Operations & Algebraic Thinking	
1. Use the four operations with whole numbers to solve problems.	-
2. Gain familiarity with factors and multiples.	-
3. Generate and analyze patterns.	<p>1E. Organizing information – Learners are able to describe data and organize information to search for relationships and patterns concerning the environment and environmental topics.</p> <p>1F. Working with models and simulations - Learners understand that relationships, patterns, and processes can be represented by models.</p>
Numbers & Operations in Base Ten	
4. Generalize place value understanding for multi-digit whole numbers.	-
5. Use place value understanding and properties of operations to perform multi-digit arithmetic.	-
Numbers & Operations- Fractions	
6. Extend understanding of fraction equivalence and ordering.	-

7. Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.	-
8. Understand decimal notation for fractions, and compare decimal fractions.	-
Measurement & Data	
9. Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit.	-
10. Represent and interpret data.	<p>1C. Collecting information – Learners are able to locate and collect information about the environment and environmental topics.</p> <p>1E. Organizing information – Learners are able to describe data and organize information to search for relationships and patterns concerning the environment and environmental topics.</p> <p>1G. Drawing conclusions and developing explanations – Learners can develop simple explanations that address their questions about the environment.</p>
11. Geometric measurement: understand concepts of angle and measure angles.	-
Geometry	
12. Draw and identify lines and angles, and classify shapes by properties of their lines and angles.	-

8th Grade

<i>Common Core Standards for Mathematics</i>	<i>NAAEE: Guidelines for Learning (8th Grade)</i>
The Number System	
1. Know that there are numbers that are not rational, and approximate them by rational numbers. _____	-
Expressions & Equations	
2. Work with radicals and integer exponents. _____	-
3. Understand the connections between proportional relationships, lines, and linear equations. _____	-
4. Analyze and solve linear equations and pairs of simultaneous linear equations. _____	-
Functions	

5. Define, evaluate, and compare functions.	-
6. Use functions to model relationships between quantities.	1F. Working with models and simulations - Learners understand many of the uses and limitations of models. (define math “function”)
Geometry	
7. Understand congruence and similarity using physical models, transparencies, or geometry software.	1F. Working with models and simulations - Learners understand many of the uses and limitations of models.
8. Understand and apply the Pythagorean Theorem.	1F. Working with models and simulations - Learners understand many of the uses and limitations of models.
9. Solve real-world and mathematical problems involving volume of cylinders, cones, and spheres.	1F. Working with models and simulations - Learners understand many of the uses and limitations of models.
Statistics & Probability	
10. Investigate patterns of association in bivariate data.	1C. Collecting information - Learners are able to locate and collect reliable information about the environment or environmental topics using a variety of methods and sources. 1E. Organizing information - Learners are able to classify and order data, and to organize and display information in ways that help analysis and interpretation. 1F. Working with models and simulations - Learners understand many of the uses and limitations of

	models.
--	---------

12th Grade

<i>Common Core Standards for Mathematics- Number and Quantity</i>	<i>NAAEE: Guidelines for Learning (12th Grade)</i>
The Real Number System	
1. Extend the properties of exponents to rational exponents	-
2. Use properties of rational and irrational numbers.	-
Quantities	
3. Reason quantitatively and use units to solve problems.	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p>
The Complex Number System	
4. Perform arithmetic operations with complex numbers	-
5. Represent complex numbers and their operations on the complex plane	-

6. Use complex numbers in polynomial identities and equations	-
Vector and Matrix Quantities	
7. Represent and model with vector quantities.	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p>
8. Perform operations on vectors.	
9. Perform operations on matrices and use matrices in applications.	

12th Grade

<i>Common Core Standards for Mathematics- Algebra</i>	<i>NAAEE: Guidelines for Learning (12th Grade)</i>
Seeing Structure in Expressions	
1. Interpret the structure of expressions	-
	-

2. Write expressions in equivalent forms to solve problems	
Arithmetic with Polynomials and Rational Expressions	
3. Perform arithmetic operations on polynomials	-
4. Understand the relationship between zeros and factors of polynomials	-
5. Use polynomial identities to solve problems	-
6. Rewrite rational expressions	-
Creating Equations	
7. Create equations that describe numbers or relationships	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1G. Drawing conclusions and developing explanations – Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p>
Reasoning with Equations and Inequalities	
8. Understand solving equations as a process of reasoning and explain the reasoning	-

9. Solve equations and inequalities in one variable	-
10. Solve systems of equations	-
11. Represent and solve equations and inequalities graphically	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1G. Drawing conclusions and developing explanations – Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p>

12th Grade

<i>Common Core Standards for Mathematics- Functions</i>	<i>NAAEE: Guidelines for Learning (12th Grade)</i>
Interpreting Functions	
1. Understand the concept of a function and use function notation	-
2. Interpret functions that arise in applications in terms of the context	-
3. Analyze functions using different representations	-
Building Functions	

4. Build a function that models a relationship between two quantities	1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.
5. Build new functions from existing functions	-
Linear, Quadratic, and Exponential Models	
6. Construct and compare linear, quadratic, and exponential models and solve problems	1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.
7. Interpret expressions for functions in terms of the situation they model	1F. Working with models and simulations – Learners are able to create, use, and evaluate models to understand environmental phenomena.
Trigonometric Functions	
8. Extend the domain of trigonometric functions using the unit circle	-
9. Model periodic phenomena with trigonometric functions	-
10. Prove and apply trigonometric identities	-

Note: No correlations were made for the **High School: Modeling** section.

12th Grade

<i>Common Core Standards for Mathematics- Geometry</i>	<i>NAAEE: Guidelines for Learning</i>
--	---------------------------------------

	(12 th Grade)
Congruence	
1. Experiment with transformations in the plane	-
2. Understand congruence in terms of rigid motions	-
3. Prove geometric theorems	-
4. Make geometric constructions	1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.
Similarity, Right Triangles, and Trigonometry	
5. Understand similarity in terms of similarity transformations	-
6. Prove theorems involving similarity	-
7. Define trigonometric ratios and solve problems involving right triangles	-
8. Apply trigonometry to general triangles	-
Circles	
9. Understand and apply theorems about circles	-

10. Find arc lengths and areas of sectors of circles	-
Expressing Geometric Properties with Equations	
11. Translate between the geometric description and the equation for a conic section	-
12. Use coordinates to prove simple geometric theorems algebraically	-
Geometric Measurement and Dimension	
13. Explain volume formulas and use them to solve problems	-
14. Visualize relationships between two-dimensional and three-dimensional objects	1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.
Modeling with Geometry	
15. Apply geometric concepts in modeling situations	1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.

12th Grade

<i>Common Core Standards for Mathematics- Statistics & Probability</i>	<i>NAAEE: Guidelines for Learning (12th Grade)</i>
Interpreting Categorical and Quantitative Data	

<p>1. Summarize, represent, and interpret data on a single count or measurement variable</p>	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p> <p>1G. Drawing conclusions and developing explanations – Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p>
<p>2. Summarize, represent, and interpret data on two categorical and quantitative variables</p>	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p> <p>1G. Drawing conclusions and developing explanations – Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p>
<p>3. Interpret linear models</p>	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations -</p>

	<p>Learners are able to create, use, and evaluate models to understand environmental phenomena.</p> <p>1G. Drawing conclusions and developing explanations –</p> <p>Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p>
<p>Making Inferences and Justifying Conclusions</p>	
<p>4. Understand and evaluate random processes underlying statistical experiments</p>	<p>1C. Collecting information – Learners are able to locate and collect reliable information for environmental investigations of many types. They know how to use sophisticated technology to collect information, including computer programs that access, gather, store, and display data.</p> <p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p> <p>1G. Drawing conclusions and developing explanations –</p> <p>Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p>
<p>5. Make inferences and justify conclusions from sample surveys, experiments and observational studies</p>	<p>1C. Collecting information – Learners are able to locate and collect reliable information for environmental investigations of many types. They know how to use sophisticated technology to collect information, including</p>

	<p>computer programs that access, gather, store, and display data.</p> <p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p> <p>1G. Drawing conclusions and developing explanations – Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p>
<p>Conditional Probability and the Rules of Probability</p>	
<p>6. Understand independence and conditional probability and use them to interpret data</p>	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p>
<p>7. Use the rules of probability to compute probabilities of compound events in a uniform probability model</p>	<p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p> <p>1G. Drawing conclusions and developing explanations – Learners are able to use evidence and logic in developing</p>

	proposed explanations that address their initial questions and hypotheses.
Using Probability to Make Decisions	
8. Calculate expected values and use them to solve problems	-
Use probability to evaluate outcomes of decisions	<p>1D. Evaluating accuracy and reliability – Learners can apply basic logic and reasoning skills to evaluate completeness and reliability in a variety of information sources.</p> <p>1E. Organizing Information – Learners are able to organize and display information in ways appropriate to different types of environmental investigations and purposes.</p> <p>1F. Working with models and simulations - Learners are able to create, use, and evaluate models to understand environmental phenomena.</p> <p>1G. Drawing conclusions and developing explanations – Learners are able to use evidence and logic in developing proposed explanations that address their initial questions and hypotheses.</p> <p>3.1A. Identifying and investigating issues – Learners apply their research and analytical skills to investigate environmental issues ranging from local issues to those that are regional or global in scope.</p> <p>3.1B. Sorting out the consequences of issues – Learners are able to evaluate the consequences of specific environmental changes, conditions, and issues for human and ecological systems.</p> <p>3.1C. Identifying and evaluating alternative solutions and courses of action –</p>

	Learners are able to identify and propose action strategies that are likely to be effective in particular situations and for particular purposes.
