

# Triple Loop Learning: The Varieties of Adaptive Management and What They Might Mean for the CBP

---

---

Michael C. Runge, *USGS Eastern Ecological Science Center  
at the Patuxent Research Refuge*

**Chesapeake Bay Program  
Science & Technical Advisory Committee  
Quarterly Meeting  
8-9 March 2022**

# STAC Word of the Day #1

## Panchreston

---

---

An explanation that is used in so many different cases that it becomes almost meaningless

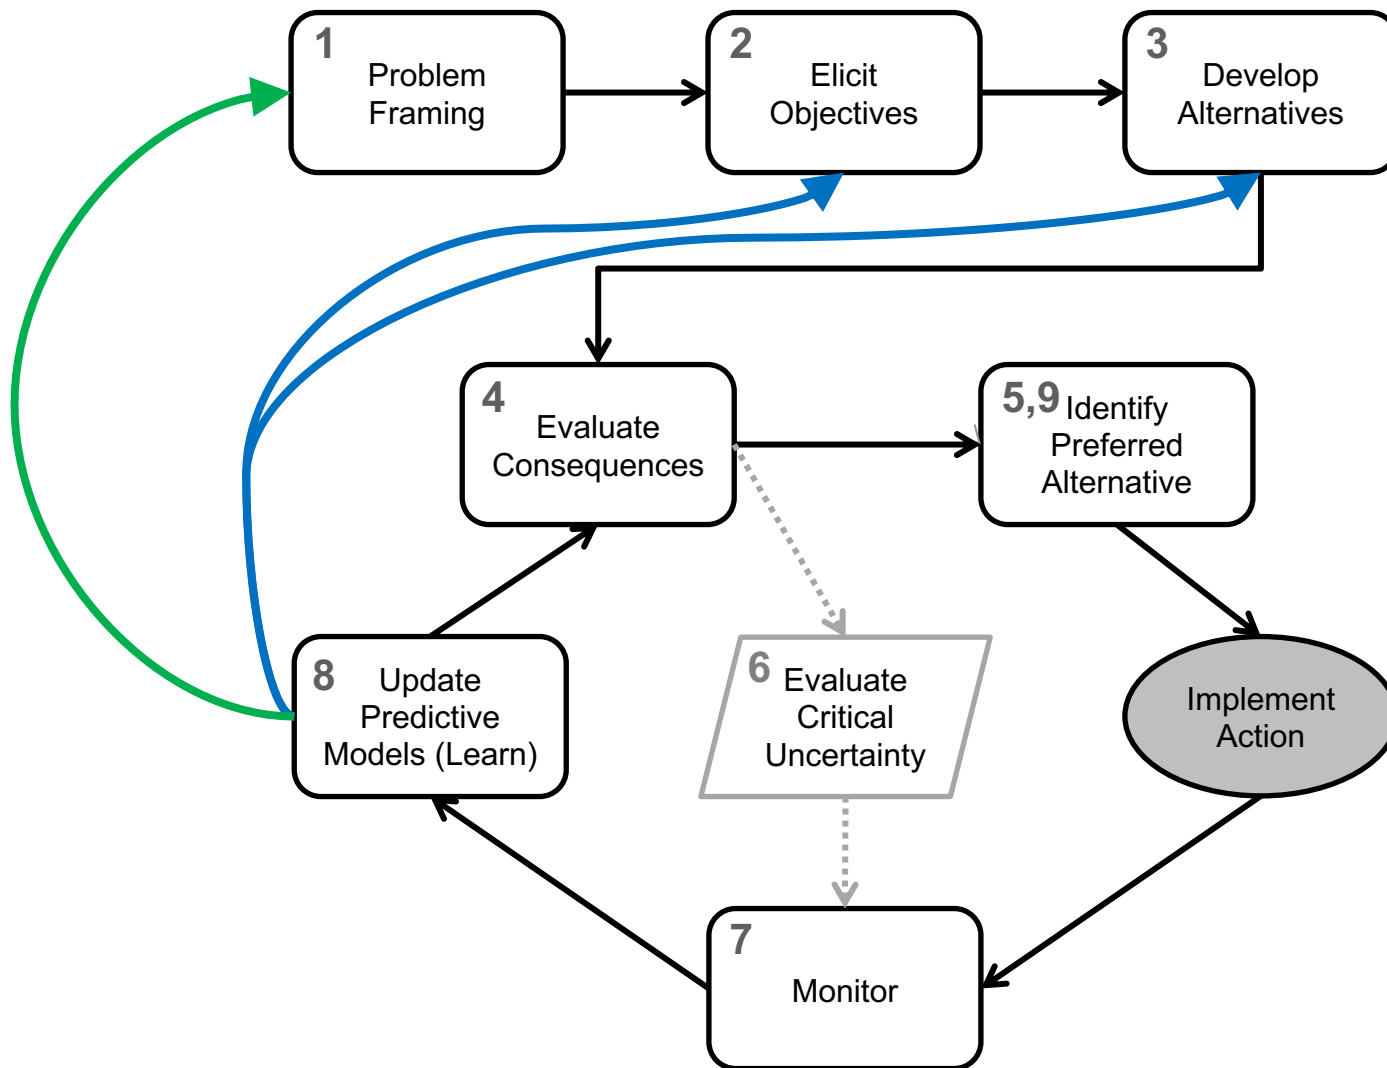

# STAC Word of the Day #2

## Adaptive Management

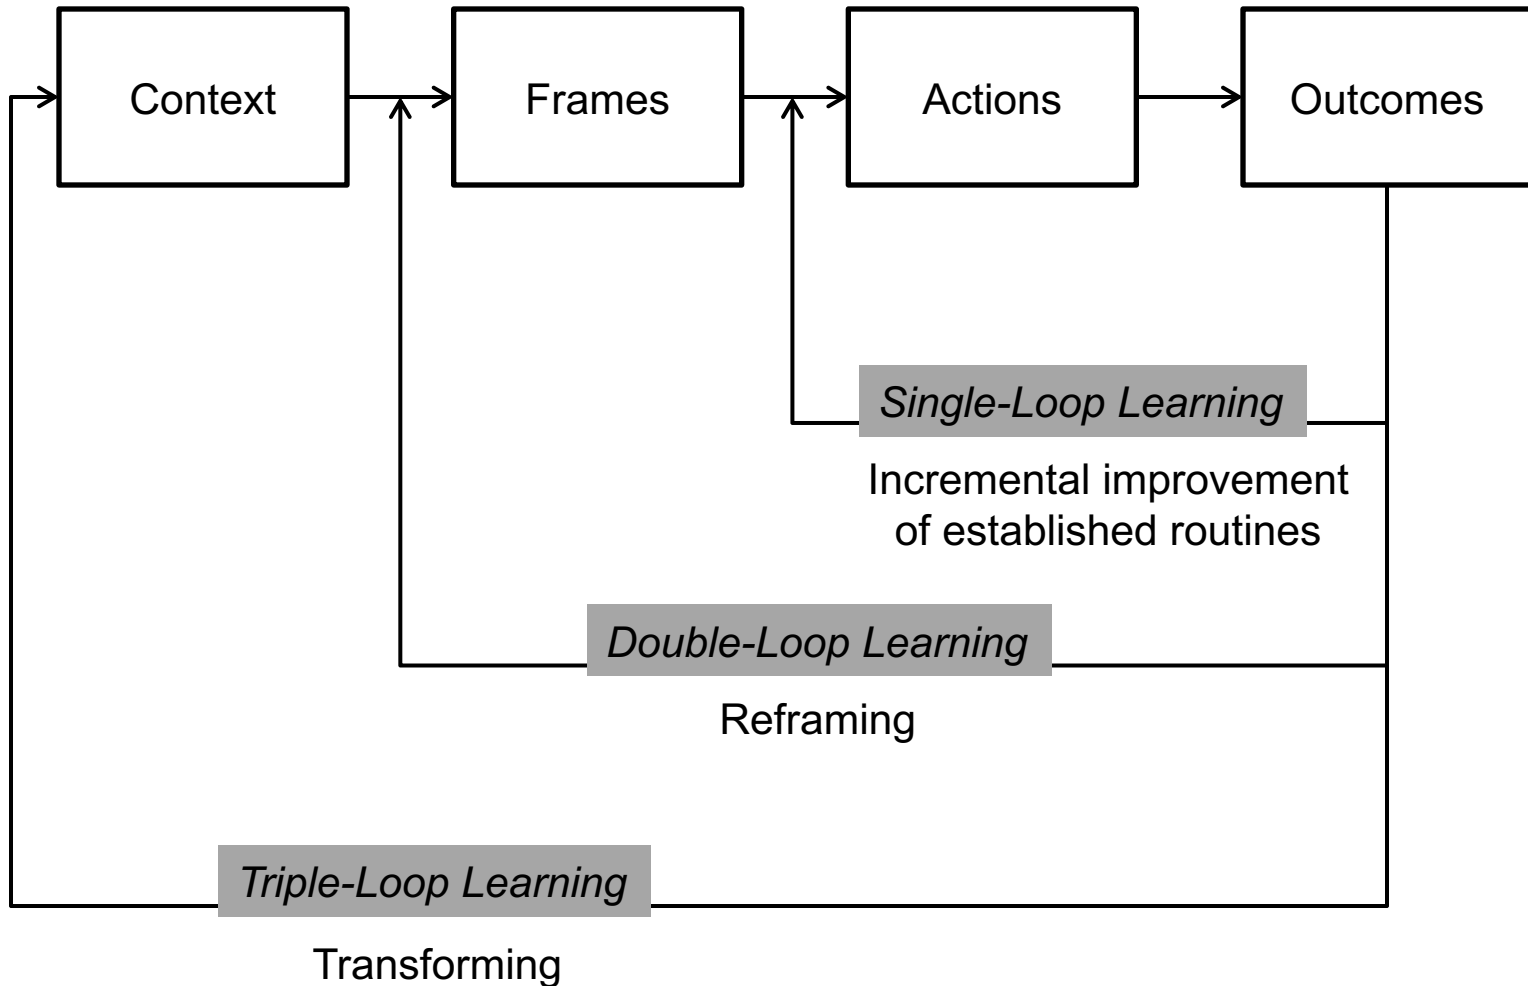

---

---

See “panchreston”

from Runge MC. 2011. An introduction to adaptive management for threatened and endangered species. *Journal of Fish and Wildlife Management* 2:220-233.

from Pahl-Wostl C. 2009. A conceptual framework for analysing adaptive capacity and multi-level learning processes in resource governance regimes. *Global Environmental Change* 19:354-365.

# How can CBP adapt?

---

- Single-loop
  - How do we better articulate critical uncertainty?
  - How do we improve monitoring?
  - How do we improve feedback from monitoring to models (learning)?
  - How do we improve feedback from learning to action?
- Double-loop
  - Do we have the right objectives and targets?
  - Are the models we're using comprehensive enough?
- Triple-loop
  - Are our institutions structured to most effectively restore the Bay?
  - Are we offering the right motivations to partners?

# Today

---

- Session 1
  - How is adaptive management practiced now, at three scales?
- Session 2
  - What opportunities are there to advance adaptive management in the future?
- Breakout
  - How might CBP adapt and how can STAC help?
