

# STEWARDSHIP OUTCOME

STAC SCIENCE NEEDS 6/14/2022

# New and Emerging Science Needs - High Priority

- Need:**  
 2022 Stewardship behavior data assimilation into [chesapeakebehaviorchange.org](https://chesapeakebehaviorchange.org)
- **Need description:** Analyze new data collected with the 2022 stewardship survey, compare 2022 data to 2017 data to 2022 data, determine how to display that comparison on the website (coding)
  - **Why needed:** The survey and website were created to establish a baseline and means to measure progress on individual stewardship behaviors. This is the first year that there will be new data to compare and display that progress. It’s not a simple exercise to put the data into a form that can be utilized, requires expertise.
  - **Current resources:**
    - Contract w/ ERG and subcontractor OpinionWorks to collect the data;
    - No resources are in place for the data analysis, assimilation;
    - Assistance for website changes not yet identified.
  - **Potential resources:** CBP Web Team for website changes (if approved)
