
New Outcome beyond 2025

Protect and enhance brook trout within the Chesapeake Bay watershed by increasing occupancy, abundance and resilience to changing environmental conditions.

- By 2035, increase brook trout occupancy by 1% in watersheds supporting **healthy populations** while achieving no net loss in other watersheds.
 - By 2035, increase abundance at 10 long-term monitoring sites.
 - By 2035, reduce identified threats by XX% to increase brook trout resilience in watersheds supporting healthy populations.
-
